Direct Supply® Attendant® Bladder Scanner

Safely, accurately and noninvasively measure bladder volume

- Help reduce the need for unnecessary catheterization
- Provide a higher level of care with this affordable equipment
- Integrate as part of your comprehensive continence promotion programs
Implementing evidence-based care, improving resident outcomes and complying with F-Tag 315 is now easier. Scientific evidence supports the use of bladder ultrasound as an important component of a continence promotion program.

**Accurately Assess Bladder Volume without Catheterization**
Research demonstrates that the use of a non-invasive bladder ultrasound can be effective in providing clinicians with accurate information on bladder volume and post-void residuals.¹

**Create More-Effective, Individualized Bladder Retraining & Toileting Programs**
Use of the Bladder Scanner to determine urine volume prior to toileting helps replace or reduce the need for a subjective, time-dependent program. You’ll know precisely when a resident may need to void or be catheterized.

**Minimize the Risk of Urinary Retention and UTIs Associated with Catheterization**
Urinary tract infections (UTIs) account for the highest number of nosocomial infections in nursing homes and hospitals.² Research demonstrates that the use of bladder ultrasound in place of catheterization can help reduce the introduction of organisms into the urinary tract, thus helping to reduce the risk of UTIs.³

**Direct Supply’s Resources for Caregivers**
Contact us to discuss incorporating the Direct Supply Attendant Bladder Scanner into your existing continence program. We’ll help you reference summaries of the latest research and best practices on bladder continence, including:

- Practical Strategies for Integrating the Attendant Bladder Scanner Into Your Continence Promotion Programs
- Templates for Developing or Revising Policies, Procedures & Documentation Tools
- Interventions to Promote Continence
- Nursing & CNA Training Resources
Accurately Assess Bladder Volumes for Improved Resident Outcomes with the Easy-to-Use Direct Supply® Attendant® Bladder Scanner

Features:

Noninvasive Bladder Volume Measurement – view a bladder image and an accurate post-void residual volume measurement in mere seconds, without the need for catheterization

Accurate Scan Readings – each scan averages 12 different readings of bladder volume, ensuring a +/-15% accuracy rate

Pre-Scan Capability – pre-scan the bladder to make sure the probe is properly placed

Easy to Use – the easy-to-read display screen clearly shows the bladder and bladder volume measurement after the caregiver follows a few simple instructions

On-Board Printer – print a record of the scan for quick and easy access

Portable for Easy Transport – optional mobile stand makes moving unit from room to room easy and helps keep unit safe from accidental damage. A protective foam-lined case is also available for transportation between buildings

Resources for Caregivers – get guidelines and tools to assist you in successfully implementing the Attendant Bladder Scanner into your existing continence programs

Staff Training – our training videos, nursing resources and quick-start guide help caregivers confidently implement the Attendant Bladder Scanner

Warranty – 1-year limited warranty on the unit; 90-day limited warranty on the probe and accessories

“The Attendant Bladder Scanner is accurate, dependable and easy to learn to use. I found it easy to transport from room to room and between practice sites. Obtaining a post-void residual using bladder scanning is a ‘best practice’ recommendation and an important addition to clinical patient care. The Attendant Bladder Scanner would be a useful addition to a Senior Living community or home health care agency.”
