

# Microfiber Gives You the Cleanest Floors Ever with Less Effort and Cost

## FEATURED PRODUCT!

When you're ready for significant savings and improved cleanliness, look to the leading microfiber cleaning system recommended by the floor care experts at Direct Supply®. From mop handles, frames and pads to compatible buckets, carts and cloths, the Rubbermaid Hygen Microfiber System offers everything you'll need.

Regular mopping is critical to helping control the spread of germs and protecting residents. But traditional wet mopping creates cross-contamination risks if mop heads and water are not changed out frequently, a time-consuming and costly task.

**Switch to microfiber and you'll never use a traditional mop again!** Microfiber cleans floors better and drastically reduces the risk of cross-contamination. Plus, it will save you time, money and physical strain.

### You'll save by:

#### *Buying Less*

Microfiber pads withstand 500 standard washes (traditional mop heads only last for 50-60 washes). Plus, they use far less chemicals because the tiny fibers effectively pick up and trap 99.54% of dirt, dust and bacteria at the microscopic level using water alone. Standard cotton mops only pick up 67% of dirt, and will re-deposit 33% of that back onto your floors.

#### *Finishing Faster*

Time savings equals real reductions in labor costs. Using a fresh damp pad for each room drastically reduces the risk of cross-contamination without requiring workers to constantly empty and refill water buckets, saving approximately an hour of labor for every 20 resident rooms.

#### *Protecting Residents and Staff*

Workers endure much less physical strain by not having to empty and refill heavy buckets, and the system's ergonomic handles are designed to reduce strain on elbows, shoulders and backs. And by using much less water, microfiber systems result in faster dry times to reduce slip hazards in communities.
