TECHNOLOGY DESIGN

OVERVIEW

As Senior Living technology systems continue to evolve, it's important to make sure the solutions you install today will serve your community well into the future. Aptura's technology design team considers your needs and today's complete low-voltage technology landscape to create the best possible solution for your residents and staff. We make sure that as technology advances, your community's systems will too.

EXPERIENCE

Aptura's technology design services are delivered by our hand-selected team of Senior Living experts, including:

Technology designers – combined 46+ years of experience with CSI, CDT, RCCD, CET and BICSI certifications and accreditations for multiple low-voltage solutions

Project managers – combined 22+ years of experience managing complex technology installations

Product management – combined 21+ years of experience in the Senior Living technology marketplace, bringing industry-leading solutions to our clients

PROCESS

The technology design team uses a multistep process:

1. First, we work with you to understand your vision, clarify your technology goals and define your success parameters.

2. We make accurate and effective solution recommendations that will achieve your stated outcomes.

3. Our engineering team designs the right technology solution package for your needs and budget, complete with construction documents, submittals, drawings and specifications.

4. We facilitate the procurement and fulfillment of your technology package so you get the products and services that will achieve your vision.

5. Finally, our project management team oversees and coordinates proper system installation with our vast network of installation experts.

DELIVERABLES

Conceptual consultation – discuss in-person how Aptura technology design can meet your needs

Schematic design – we recommend which systems will best fit your community

Design development – receive floor plans, schedules and preliminary specs for your reference

Construction documents – complete documents for architects and engineers guide the installation of your technology systems

3-part specifications – we finalize our drawings and part guidelines so you have everything you need to implement your systems

DIRECT SUPPLY aptura®

Your Dedicated Partner for
COMPLETE Technology Solutions

At Direct Supply, we're committed to designing technology solutions that deliver exceptional outcomes and improve staff efficiency. When you partner with us for system procurement and installation services, you also gain access to industry-leading products and services that make your design come to life.

From concept to completion, rely on our team to deliver the best technology integration experience in Senior Living.

Technology Design

Avoid construction delays and change orders with our Senior Living-specific consultation and on-trend solution design, backed by the experience, processes and documentation to make your new construction technology experience a success.

Procurement

Easily fulfill your solution's design by procuring recommended products from our vast portfolio of top brands at competitive prices.

Installation & Project Management

Let us handle your system's installation and provide complete project oversight to keep things on time and within budget.

Client Support

Rely on our team for ongoing system support and simplified replacement part ordering. All systems we install will be added to your Direct Supply TELS building management platform for proper system maintenance.
